

Having described my invention I claim;

1 - Fluorescent light fixture comprising;

a - a plurality of elongated light reflectors and each end of said reflectors attached to socket mount/wire arms and

b - said socket mount/wire raceway arms attached to ends of ballast channel assembly,

c - a single ballast mounted in said ballast channel assembly,

d - fluorescent light tube sockets for a plurality of fluorescent light tubes mounted on said socket mount/wire raceway arms at each end of said elongated light reflectors in the concave side of said elongated light reflectors

e - a plurality of elongated fluorescent light tubes inserted into said light tube sockets in the concave side of said elongated light reflectors and,

f - rim edges on said elongated light reflectors overlap on adjacent rim edges of said elongated light reflectors.

2 - Fluorescent light fixture of claim 1, further
consisting of;

- a - a plurality of elongated light reflectors and
each end of said reflectors attached to socket
mount/wire arms and,
- b - two of said socket mount/wire raceway arms attached
one on each end perpendicular to ends of ballast
channel assembly,
- c - a single ballast mounted in said ballast channel
assembly
- d - light tube sockets for plurality of fluorescent
light tubes mounted on said socket mount/wire
raceway arms at each end of said plurality of
elongated light reflectors in the concave side
of said plurality of elongated light reflectors
and
- e - said plurality of elongated light tubes inserted
into said light tube sockets in the concave side of
said light reflectors and,
- f - slots in said reflectors for indirect lighting and
- g - suspending, by hanger wire/chain, said assembly of
fluorescent light fixture from a ceiling.

4
5 3 - A fluorescent elongated tube light fixture, of
6 claim 1, wherein further improvement consists of;
7 a - a reflector fitting over said fluorescent elongated
8 tube light for maximum light reflection downward
9 b - said fluorescent elongated tube light having a
10 diameter D, then the radius R of the bend of the
11 cross section of said reflector is $D \times 0.875$,
12 c - the arc at the bend of the reflector is equal to
13 120° ,
14 d - the sides of said reflectors are tangent to the
15 radius at the ends of said arc,
16 e - said reflector sides extend outward to a dimension
17 between said reflector sides equal to $3.25 \times$
18 diameter of the said fluorescent tube and,
19 f - the distance between said fluorescent elongated tube
20 light and the arc of the bend of said light reflector
21 is equal to $0.375 \times$ diameter of said fluorescent
22 elongated tube light and,
23 g - distance from bottom of said fluorescent tube light
24 to span line between said reflector side edges is
25 equal to $0.5 \times$ diameter of fluorescent tube light.

5 4 - A method of focusing downlight of a fluorescent
6 hanging light fixture consisting of;
7 a - reflectors over each fluorescent elongated light
8 tube,
9 b - said reflector extending the length of said
10 fluorescent elongated light tube,
11 c - cross section of said reflector comprising an arc
12 straddling said fluorescent elongated light tube and
13 at a space of 0.375 times diameter of said fluorescent
14 elongated light tube from said fluorescent elongated
15 light tube
16 d - said arc of said reflector having a radius of 0.875
17 times the diameter of said fluorescent light tube
18 and said arc ranging from 120° to 160° and
19 e - sides of said reflector tangent at each end of said
20 arc range of said reflector.
21 f - a single ballast mounted in ballast channel assembly
22 and,
23 g - a plurality of said reflectors and fluorescent elong-
24 ated light tubes mounted in said fluorescent elongated
25 light fixture.

Page 18.

- 5 - An elongated fluorescent light fixture of claim 1,
wherein further improvement comprises,
a - a plurality of at least five and not more than eight
elongated fluorescent light tubes mounted in a
fluorescent light tube assembly and
b - a ballast mounted in ballast channel of said
elongated fluorescent light fixture.

- 6 - Elongated fluorescent light tube reflector, of claim 1,
selected from the group consisting of polished sheet metal,
metal coated plastic, and metal coated glass.
